Principal Software Engineer with 12+ years building enterprise platforms across architecture, APIs, infrastructure, and CI/CD. I focus on changes that hold up over time, systems other engineers can run without me, and close work with product and customers.

EXPERIENCE

HighRes Biosolutions, Beverly, MA | November 2021 – Present

Principal Software Engineer

- Lead architect of the CellarioOS platform for 4+ years, designing, building, and maintaining its technical foundation, then using it to ship a full product refresh and rebrand into a modern workflow-based product in months
- Design and develop RESTful microservices, reviewing and redesigning APIs to split or merge by logical functionality, and establishing style and error-handling standards
- Turn public APIs into standalone products for non-engineers such as laboratory scientists, letting customers build custom functionality and influencing purchase decisions
- Rebuild relational databases and data access layers in EF Core with table-per-type inheritance, automating schema migrations and deployment
- Introduce RabbitMQ and Redis across services, cutting inter-service latency from seconds to sub-milliseconds and batch sync runtime from over an hour to near-instant
- Upgrade the entire CellarioOS platform to .NET 10 with zero regressions
- Architect a .NET Aspire meta-repo with submodules enabling one-click full-stack development and debugging, replacing a fragile Docker Compose setup and getting non-C# developers productive quickly
- Introduce AI-assisted development across the team: coding agents configured with repository context and guardrail hooks, plus AI-generated test suites that guard against regressions, speeding up planning, implementation, and review

Brainshark Inc., Boston, MA | July 2018 – November 2021

Senior DevOps Engineer II | October 2020 – November 2021

- Migrate a 20-year-old application to Azure in 6 months as the sole DevOps engineer on a cross-functional team
- Design enterprise Infrastructure as Code with Packer, Terraform, PowerShell, and Python to provision and scale infrastructure across on-premise and cloud, including Windows and Linux machine images
- Build CI/CD pipelines with Jenkins and Octopus for .NET, Angular, and Python across on-premise and Azure
- Replace a legacy A10 load balancer with Azure Application Gateway, automating the migration with a custom Python package integrated into Terraform and Octopus
- Improve end-to-end application load times by 10-100x through infrastructure tuning

Senior Software Engineer I & II | July 2018 – October 2020

- Technical lead on high-priority cross-team initiatives driving system-wide improvements
- Proposed and built a GraphQL API with OAuth 2.0 for a unified data-access web service
- Built full-stack integrations with Google Drive, Salesforce, and Microsoft Dynamics
- Reduced the failure rate of critical features by 11x
- Built a serverless Azure function that shrank 300k+ daily image assets by up to 65%
- Separated shared business logic from a legacy monolith into independently deployable services, cutting deployment times by 20x

- Architected a storage abstraction over Azure Blob and Amazon S3, replacing a third-party solution that cost \$100k per year

Digital Federal Credit Union, Marlborough, MA | March 2016 – June 2018

Application Developer

- Built a loan-sharing and participation web portal for securely exchanging sensitive loan data with other financial institutions and selling loan portions
- Supported and enhanced an in-house payment platform processing 35,000+ payments monthly
- Re-architected an acquired third-party balance-transfer solution to fit existing infrastructure
- Built a responsive, dynamic form-generation platform serving thirteen web and mobile forms
- Scrum Master for the dev team, running ceremonies and building Jira workflows

Earlier Experience

- **Software Developer**, APBN Inc., Pulaski, PA (2013 – 2015): built C#/MySQL applications to streamline business operations
- **iOS Developer**, Appex LLC (2012 – 2016): published health & fitness apps in Objective-C with 40,000+ App Store downloads

SKILLS

- **Languages & Frameworks:** C#, .NET, Python, SQL, JavaScript, React, Angular, HTML/CSS
- **Infrastructure & DevOps:** Kubernetes, Docker, Helm, Terraform, Packer, Jenkins, Octopus, PowerShell, Git, GitHub, Infrastructure as Code, CI/CD
- **Cloud & Data:** Azure, Azure Key Vault, RabbitMQ, Redis, SQL Server, EF Core, GraphQL, REST APIs, Microservices
- **AI-Assisted Development:** Claude, Codex, GitHub Copilot, AI agent configuration, automated testing
- **Architecture & Practices:** Enterprise Software Architecture, .NET Aspire, Object-Oriented Design, Agile, TDD, Scrum

EDUCATION

Youngstown State University, Youngstown, OH

- **Bachelor of Science**, August 2013
- Major: **Computer Science** | Minor: **Math**
- Overall GPA: **3.64/4.0**
- **Magna Cum Laude**, Dean's List
