Principal Software Engineer with 12+ years building enterprise platforms across architecture, APIs, infrastructure, and CI/CD. I focus on changes that hold up over time, systems other engineers can run without me, and close work with product and customers.

EXPERIENCE

HighRes Biosolutions, Beverly, MA | November 2021 – Present

Principal Software Engineer

- Lead architect of the CellarioOS platform for 4+ years, designing, building, and maintaining its technical foundation, then using that foundation to ship a full product refresh and rebrand into a modern workflow-based product in months
- Design and develop RESTful microservices, reviewing and redesigning APIs to split or merge by logical functionality, and establish style and error-handling standards
- Turn public APIs into standalone products for non-engineers such as laboratory scientists, letting customers build custom functionality and influencing purchase decisions
- Rebuild relational databases and data access layers using Entity Framework Core (EF Core) with table-per-type relationships, optimizing schema change implementation and automating deployment
- Collaborate with DevOps to integrate EF Core, Azure Key Vault, RabbitMQ, and Redis into infrastructure with appropriate security, logging, and on-call error monitoring in place
- Improve inter-service communication by introducing RabbitMQ, reducing latency from seconds to sub-milliseconds, and eliminating direct API-to-API dependencies
- Cut batch sync job runtime from over an hour to near-instant using Redis caching, with stable crash-free operation
- Work with Helm Charts, Kubernetes, Docker, and Jenkins to troubleshoot and optimize CI/CD pipelines, reducing deployment times and increasing system reliability
- Upgrade the entire CellarioOS platform to .NET 10 with zero regressions
- Architect a .NET Aspire meta-repo with submodules enabling one-click full-stack development and debugging, replacing a fragile Docker Compose setup and getting a team of non-C# developers productive quickly
- Use AI-assisted development tools (Claude, Codex, Copilot) to speed up planning, implementation, and code review
- Build out near-complete automated test suites using AI to verify changes and prevent regressions across microservices
- Configure AI coding agents with role-specific instructions, repository context, and behavioral guardrails via hooks to ensure consistent, high-quality output aligned with team standards

Brainshark Inc., Boston, MA | July 2018 – November 2021

Senior DevOps Engineer II | October 2020 – November 2021

- Migrate 20-year-old application to Azure in 6 months as the sole DevOps engineer on a cross-functional team
- Design enterprise Infrastructure as Code (IaC) solution using Packer, Terraform, PowerShell, and Python to create, maintain, and scale application infrastructure reliably both on-premise and cloud
- Set up CI/CD pipelines using Jenkins and Octopus for .NET, Angular, Python, on-premise, and Azure solutions
- Configure Azure Application Gateway load balancer from the ground up to replace legacy A10 load balancer
- Develop Python package to automate A10 configuration and integrate into Terraform and Octopus
- Build and configure both Windows and Linux machine images using Packer and PowerShell
- Refine infrastructure configuration to improve end-to-end application load times by 10-100x

- Introduce formal git branching and peer-review process to the DevOps team for IaC solutions
- On-call 24/7 for production alerts, resolve issues to ensure site stability

Senior Software Engineer II | July 2020 – October 2020

Senior Software Engineer | July 2018 – July 2020

- Technical lead on high priority projects across multiple engineering teams, driving major improvement initiatives across the entire system
- Integrated products with a newly acquired company's engineering team to deliver a seamless UX
- Proposed and implemented GraphQL API with OAuth 2.0 to provide a robust data access query web service
- Built full-stack integrations with third-party products including Google Drive, Salesforce, Microsoft Dynamics
- Reduced failure rate of critical features by 11x and optimized code for maintainability and reliability
- Built a cost-efficient serverless Azure function to reduce the size of 300k+ daily image assets by up to 65%
- Separated shared business logic from a legacy monolithic code base into independently deployable solutions, reducing deployment times by 20x
- Architected services to abstract file storage and retrieval through any storage medium (Azure Blob, Amazon S3), replacing a 3rd party solution costing \$100k per year

Digital Federal Credit Union, Marlborough, MA | March 2016 – June 2018

Application Developer

- Re-architected an acquired third-party balance transfer solution to fit within existing infrastructure
- Created a responsive, dynamic form generation platform for web and mobile hosting thirteen forms
- Built a loan-sharing and participation web portal for securely sharing sensitive loan data with other financial institutions and offering portions of loans for sale
- Supported and enhanced in-house payment platform handling over 35,000 payments monthly
- Produced Jenkins build pipelines, performed nightly and emergency production deployments and validation
- Collaborated with server and security teams to design secure web application standards and architecture
- Scrum Master for development team; led stand-ups and refinement, created Jira workflows and Agile processes

APBN Inc., Pulaski, PA | December 2013 – November 2015

Software Developer

- Developed applications optimizing business operations and organizing data using C# and MySQL
- Worked with employees to identify pain points and inefficiencies, and built software solutions to address them

Self Employed Apex LLC | June 2012 – March 2016

iOS Developer

- Created several health & fitness apps hosted on the iOS App Store with 40,000+ downloads
- Developed native iOS apps in Objective-C using MVC design pattern and Apple's iOS guidelines

WM Associates Inc., Burton, OH | 2013

Software Engineer

- Contributed to a real-time data acquisition, test and analysis web application using C#, XAML and Oracle
- Created dynamic charts, graphs, and tables for large scale data analysis using Infragistics

SKILLS

- **Languages & Frameworks:** C#, .NET, Python, SQL, JavaScript, React, Angular, HTML/CSS
- **Infrastructure & DevOps:** Kubernetes, Docker, Helm, Terraform, Packer, Jenkins, Octopus, PowerShell, Git, GitHub, Infrastructure as Code, CI/CD
- **Cloud & Data:** Azure, Azure Key Vault, RabbitMQ, Redis, SQL Server, EF Core, GraphQL, REST APIs, Microservices
- **AI-Assisted Development:** Claude, Codex, GitHub Copilot, AI agent configuration, automated testing

- **Architecture & Practices:** Enterprise Software Architecture, .NET Aspire, Object-Oriented Design, Agile, TDD, Scrum

EDUCATION

Youngstown State University, Youngstown, OH

- **Bachelor of Science**, August 2013
- Major: **Computer Science** | Minor: **Math**
- Overall GPA: **3.64/4.0**
- **Magna Cum Laude**, Dean's List
